

SALON

by milk + honey

HAIR EXTENSION HOME CARE + CONSENT

Please read the instructions carefully and initial each section.

I, _____,
will follow and abide by these instructions:

Do not shampoo for two days after receiving your hair extensions. Always wash your hair with your head back and not tilted forward. Never dry with a scrubbing action, instead wrap with a towel to absorb water.
Always dry bonds to prevent breakdown.

initial here _____

Always use anti-tap after every wet treatment on the bonds. Mix 1 line of anti-tap to 8 oz. of water in a spray bottle. If you cannot shampoo immediately any time when the bonds are wet, spray anti-tap on the bonds and then carefully dry. Shampoo, apply anti-tap and then dry the bonds as soon as possible. Do not use sulfur products or water that contains sulfur.

initial here _____

Brush your extensions three times a day, with recommended brush. Brush row by row, scalp to ends, starting from the nape up. ALWAYS pull extensions into a loose hair elastic while sleeping or any activity that has your hair blowing in the wind. This is extremely important to prevent tangling or matting.

initial here _____

Return to SALON by milk + honey in two weeks for a checkup.

initial here _____

You may use curling irons, flat irons and hot rollers, but they MUST be kept at least 1.5 inches from the hair extension bond.

initial here _____

Activities taking place in a constant damp environment such as aerobics, hot yoga, steam baths, or saunas may lessen the longevity of your hair extensions.

Precautions should be taken to avoid these conditions.

initial here _____

Seawater and pools can cause the bonds to breakdown due to the constant damp environment. To minimize these effects, wet hair completely in a shower and apply anti-tap prior to swimming. After swimming, shampoo, apply anti-tap and blow dry the bonds to prevent bond breakdown.

initial here _____

Some hair and hair extension loss is normal and to be expected. Average loss is 50-150 hairs a day. A full head application covers approximately one third of the head. You can expect to see a small quantity of naturally released hairs trapped in the attachments after some time. This is normal and should not be interpreted as hair pulled out of the scalp by the extensions themselves. Daily brushing close to the scalp and finger separation of the applied strands will avoid matting in this area.

initial here _____

I understand that traction alopecia (hair loss) is a risk of any hair extension service.
